

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

LE ROY, Sec.

41. Notes by Mr. Ruger.—In a court-yard leading from the Wall street ferry, Brooklyn side, *Galeopsis tetrahit*, L., was found by Mr. Merriam. This seems to have been forgotten by him. I have a specimen from there.—It may not be uninteresting to state that *Briza maxima*, L., has escaped from the gardens in Springfield, Mass., near the R. R. station, where I saw it last summer.—*Stellaria Holostea*, L., has grown on Train's Meadow Road for several years.—*Chenopodium glaucum*, L., grows in Newark avenue, Hudson City, N. J.—*Hydrophyllum Virginicum*, L., has not been heretofore reported from Long Island. It grows at St. Ronan's Well, and elsewhere on the north side.

42. *Darlingtonia*.—The *Gardeners' Monthly*, for June, claims for Mr. Taplin, South Amboy, the credit of being the first to bring this plant into bloom on this side of the continent. Dr. Thurber had it flower early in April, 1870, as reported in the BULLETIN for that month. Mr. Bower also had it in flower, a year or more ago; and, if we rightly understood Dr. Torrey, a lady, to whom he gave some of the roots about the same time, was very successful. We are the more surprised at this oversight on the part of the editor, as the flowering of these plants gave occasion to Dr. Torrey's testimony to the remarkable accuracy of Mr. Charles Sprague's botanical drawing (vid. BULLETIN, April, 1871). De Candolle had doubted whether Sprague had possibly made a mistake, or, as seemed more likely, Nature had deviated. Dr. Torrey showed that Sprague and Nature were all right. It was M. De Candolle, excellent botanist though he is, who had erred.

43. *Hall's Oregon Plants*.—The Proceedings of the American Academy of Arts and Sciences for February, 1872 (issued in May), contain an enumeration, by Prof. Gray, of a collection of plants made by Mr. Elihu Hall, in Oregon, in the summer of 1871. The collection numbers 700 species. We are so accustomed, in collections made upon the Pacific Coast, to find large accessions to our North American Flora, that one in looking over this enumeration is struck with the fewness of new species. Many little-known plants have been added by this collection to our herbaria, and the synonymy of
